SUMMARY

Motivated Computer Science graduate with a solid foundation in programming, algorithm design, and software development. Experienced in collaborating on innovative projects and implementing efficient solutions to complex problems. Passionate about leveraging technology to create impactful applications in real-world settings.

EXPERIENCE

Front-End Developer (Infollective Solutions Sdn. Bhd.)

January 2025 - Present

- Developed and maintained scalable, modular front-end features using Next.js, React, and TypeScript for a complex ERP system.
- Implemented dynamic forms, role-based access control, and reusable UI components, enhancing maintainability and reducing development time for new features by 30%.
- Collaborated cross-functionally with backend, QA, and product teams to translate business requirements into responsive, accessible UIs with optimized performance and SEO using server-side rendering and API integration.

Repayment Section Intern (Yayasan Sarawak)

March 2024 - June 2024

- Assisted in repayment operations, including generating and managing repayment notices.
- Automated the processing of repayment letters by developing an app to scan and transfer data into Google Sheets.
- Provided support in streamlining workflows for the repayment section.

I.T Department Intern (Pustaka Negeri Sarawak)

September 2021 - February 2022

- Assisted with IT operations, including software installation and troubleshooting technical issues for staff.
- Developed an online system for generating certificates for event participants, reducing manual workload.
- Supported the maintenance of IT infrastructure and provided solutions to daily technical challenges.

EDUCATION

Bachelor of Computer Science (Hons.) (UiTM Shah Alam)

March 2022 - June 2024

CGPA: 3.30

Diploma in Computer Science (UiTM Kampus Samarahan 2)

September 2019 - February 2022

CGPA: 3.35

SKILLS

Programming Languages: HTML, PHP, CSS, SQL, Java, JavaScript, TypeScript, Python, and Kotlin.

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, and Bootstrap.

Backend: Node.js, Flask, Express.js, and Django.

Database: MySQL, Room Database, Firebase, PostgreSQL, and MongoDB.

Other: Artificial Intelligence Development, Mobile Application Development, Game Development, Software Testing and Debugging.

PROJECTS

Speech Emotion Recognition Using Machine Learning

- Built a machine learning model using TensorFlow and Scikit-learn to classify speech into emotional categories.
 - Preprocessed audio data and optimized the model to achieve high accuracy in recognizing emotional speech patterns.
-

Real-Time Sign Language Detection

- Developed a machine learning-based system for real-time sign language gesture detection using Python.
 - Applied deep learning techniques to accurately recognize and classify hand gestures for sign language.
-

StarCraft 2 Training System

- Designed an A.I module with reinforcement learning to simulate advanced strategies for a training platform.
 - Integrated A.I capabilities to improve decision-making, offering users a dynamic and challenging training experience.
-

Frequency Analysis Tool

- Built a Python-based tool for analyzing and decrypting substitution ciphers, including Caesar cipher decryption.
 - Enabled efficient decryption of encrypted text through analysis of frequency patterns and character occurrences.
-

Letter Scanning Application (Let'Scan)

- Developed a mobile app to automate repayment letter data transfer into Google Sheets, reducing manual workload.
 - Improved the repayment section's operational efficiency and minimized errors with seamless data automation.
-

Blood Donation Tracking Application

- Built a mobile app using Android SDK to track donation events and maintain offline user records.
 - Designed an intuitive interface for users to monitor their blood donation history and upcoming events.
-
